Distinct beliefs
$b = e_3,\ \ c = (e_1 + e_2)/2$
Same prediction
$bE = cE = (1/2, 1/2)$
A quotient edit must return one result
Apply the specified edit
$e_3 \mapsto e_1$; anchors fixed
Different edited beliefs
$bKE = (1, 0)$
$cKE = (1/2, 1/2)$
Conflict: one compressed input, two required outputs
